

Awesome Nextjs [Download The PDF](#)

List of NPM libraries that helps to build small and large-scale applications with next.js. I created a list based on my working experience.

I used 80% of the package as a front-end developer in this list. In the future, I will discover and mention more packages in the current list that helps build nextjs or front-end developers more efficiently for everyone.

Contributing

You can share your favourite library, tool, or template related to nextjs. It helps full for other developers. Before the share your favourite library, tool, or template, please read our [Contribution guidelines](#).

How to contribute?
